

MAKING CONTACT

The best of both worlds

When you need the best of everything, Italian gunmaker FAIR's Combi offerings will delight hunters around the world. Now, though, its Combi Deluxe is also available in a lightweight version, the XLight.

For more than 35 years, FAIR has specialised in the production of smoothbore shotguns, whose excellent quality is appreciated worldwide.

Its over-and-under Combi shotguns are the result of a close and enduring cooperation between technicians, external consultants and lovers of rifled guns.

A very important feature of these models is that each piece is tested for calibration, with two shots fired from a distance of around 50 metres within a firing diameter of 50 millimetres.

This line of products includes four models with two different action bodies for 12 and 20 gauge, an optional Stecher trigger and an additional pair of steel-shotproofed interchangeable smooth-bore barrels (12 and 20 gauge) equipped with Technichoke interchangeable chokes.

The Combi Deluxe XLight featured here is made using an aluminium

action, making it lighter in weight than the other models, something hunters walking long distances will surely appreciate.

A FINE COMBINATION

FAIR is well known for its 'tradition and technology' slogan - the cornerstone of its rifle production - and nowhere is this more evident than in its Combi guns range.

While the manufacturing process is still extremely complex and mostly carried out by hand, FAIR has worked alongside its technicians, specialist contractors and artisans to develop dedicated production cycles.

These include new adjustment systems, barrel-welding procedures and a broader use of interchangeable components, all designed to make it an international leader in the market.

STRONG FEATURES

An important feature of the Combi

models is the optional smoothbore barrel, available in a 12 gauge for the XLight version.

It has a 63cm or 24 1/2" sin barrel, comes with three interchangeable Technichokes, a manual extractor and a double trigger.

The Technichokes are a vital tool in the shooter's armoury to enable them to adapt to different situations hunters may face during the season, while more and more competition shots are also finding them a must-have accessory.

There are three versions available - Hunting XP50, Sport XP70 and In/Out XP100. The first two are nickel-plated, both internally and externally - giving the choke an improved capability to withstand salt-mist exposure - while the XP100 is surface burnished for better camouflage.

The nickel plating not only improves corrosion resistance but also makes the chokes extremely

bright, with an even surface and increased surface hardness.

FAIR's Technichokes have been produced with the same material for more than 25 years, are steel-shotproofed while their internal shape has been specifically designed to ease the flow of shot, improving penetration and reducing internal friction.

The Combi De Luxe XLight is offered in 12 gauge with a selection of rifle calibres, including .22Hornet, .222Rem, .223 Rem, 6.5x55, 6.5x57R, 5.6x50R, 30.06, .308W, .270W, 7x57R, 7x65R, 8x57Jrs, 9.3x7.4R and 30R Blaser.

All FAIR shotguns are fitted with quality wood parts, matched and assembled to action bodies by careful embedding.
